

Fluorosint® 135 PTFE

Excellent Machinability, Stability and Performance Value

Competitive Advantage

Fluorosint® product family is not the same old typical PTFE compound. Fluorosint® is well known for its strong ability to outperform where all other compounds fall short. Whether it's the continuous use temperatures up to 500°F, improved deformation under load, lowest coefficient of friction or the low uniform coefficient of linear thermal expansion, Fluorosint® simply performs.

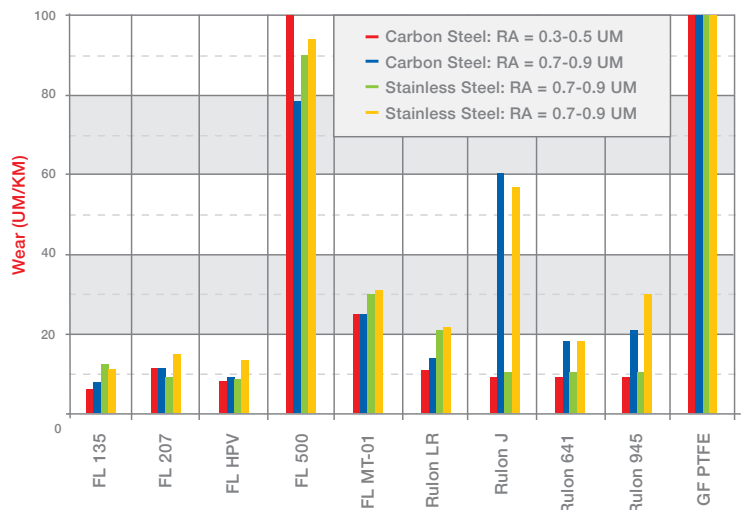

Our newest Fluorosint® 135 blend offers high performance at an extremely competitive price. A perfectly blended material which provides extreme performance for seals, bearings, and wear applications. The lowest coefficient of friction material with low deformation provides superior performance over typical filled PTFE compounds.

Application Highlights

- Compressor, pump and valve wear parts
- Seals, bearings, thrust washers and seats
- Insulating blocks and fixtures in diagnostic equipment
- Compressor piston rings, rider bands & packing sets
- Lubricated or unlubricated dry running applications
- Typical air, hydrogen, nitrogen, refrigerant gas service
- Service temperatures of 450°F / 232°C
- Increased part life and improved performance
- Applications in Chemical Processing, Medical, Aerospace, and Food Market

Wear Rate at High Temperature

Wear at 150°C (O-28 km / 300°F (O-17.7mi)
Plastic Pin on Rotating Steel Disk, Speed = 0.33 m/s., Pressure = 3MPa, Pin Diameter = 6mm, Plastic pin on rotating steel disk, Speed = 65.0 ft/min, Pressure = 435 psi, Pin Diameter = 0.236"

Key Benefits Compared to other filled PTFE Compounds

- Lowest wear rate
- Lowest CLTE
- Lowest COF
- Lowest deformation
- Counter surface has little effect on performance
- No excessive run in period
- Extremely chemically inert
